

Multi Capture Version

4

Interrogation Rooms, suitable for children

Originally Multi Capture V4 was designed for therapy recording. The focus there is on speech intelligibility, privacy protection, ease of use.

The concept has been further developed for evidential recording.

A one-way mirror can be replaced by electronic transmission to remote areas and to rooms on other floors.

Video and audio streaming is also possible without recording.

- simple user interface in English
- simple time-saving application
- lip-sync recording of image and sound
- excellent speech intelligibility
- recording format in industry standard
- recording in HDTV Video H.264, Audio (AAC, 16 bit)
- video and audio files can be played back with any standard player
- protocols for court usage
- recording to external, password protected, encrypted hard drives
no recordings will be left on the recording system
evaluation on any other system possible
- no software installation needed to enter the password
(independent of operating systems)
- simple control via push button with LED control
ready = **green** / record = **red**
- English training materials in short form (PDF)
- markers and areas can be commented
- audio export for automated transcription software and F4
- export to DVD without rendering
- smooth zoom-in during and after recording
- Axis-cameras with optical zoom, controllable via Joystick
- incorporated radio clock
- file names include date and time
- superimpose of date, time and room information on every video picture

optional: viewers at other rooms can send notes to the examiner
with tablet PCs using WLAN

Interrogation Rooms, suitable for children

view of sample room, equipped with 2 Axis-cameras und 2 microphones

viewing angle of the controllable camera,
automatically aligned to the place of the child

Interrogation Room with playing section for children

2 Axis-cameras, one of it can be vertically adjusted, 2 ceiling microphones

view from controllable camera 1

Start / Stop buttons with LED control

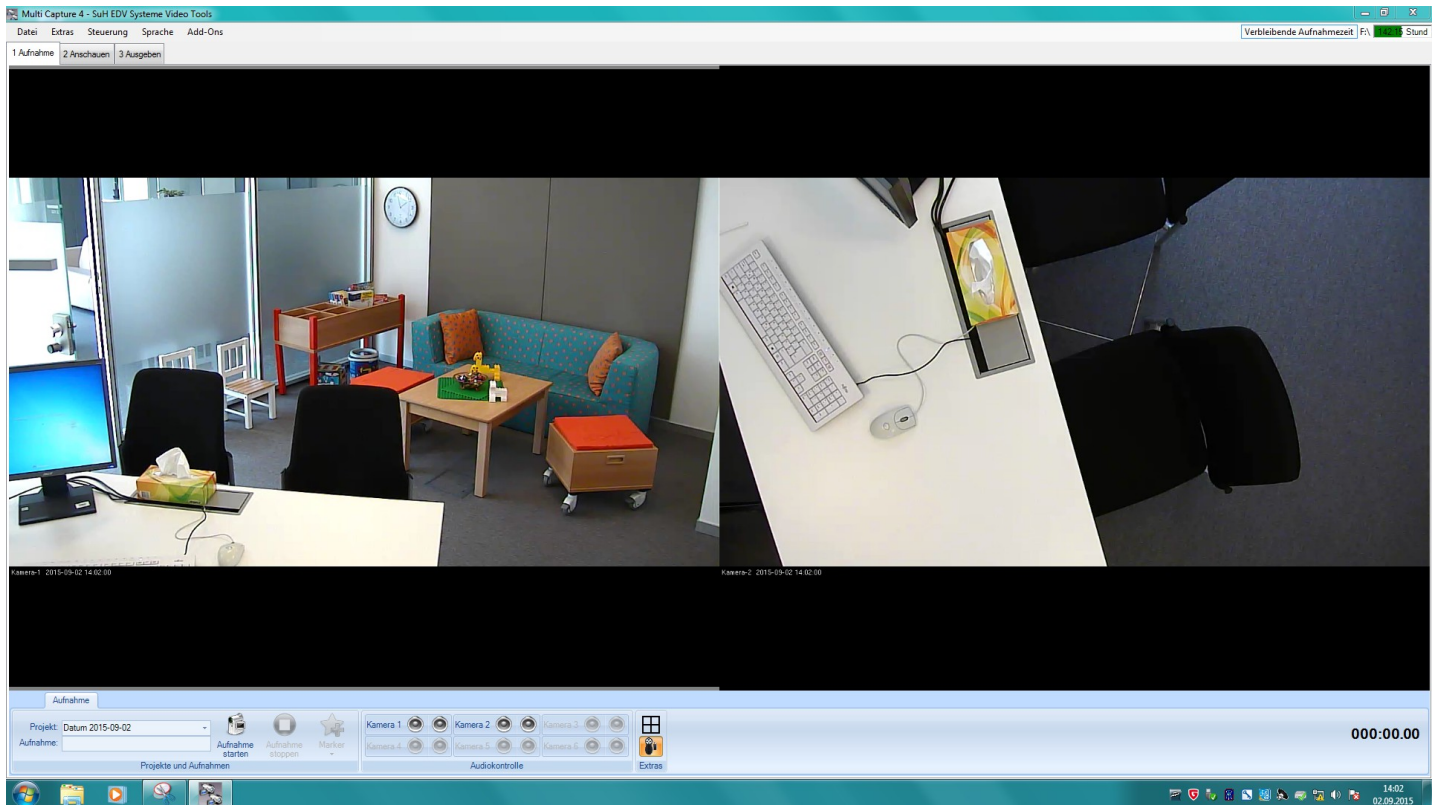

samples of technical equipment

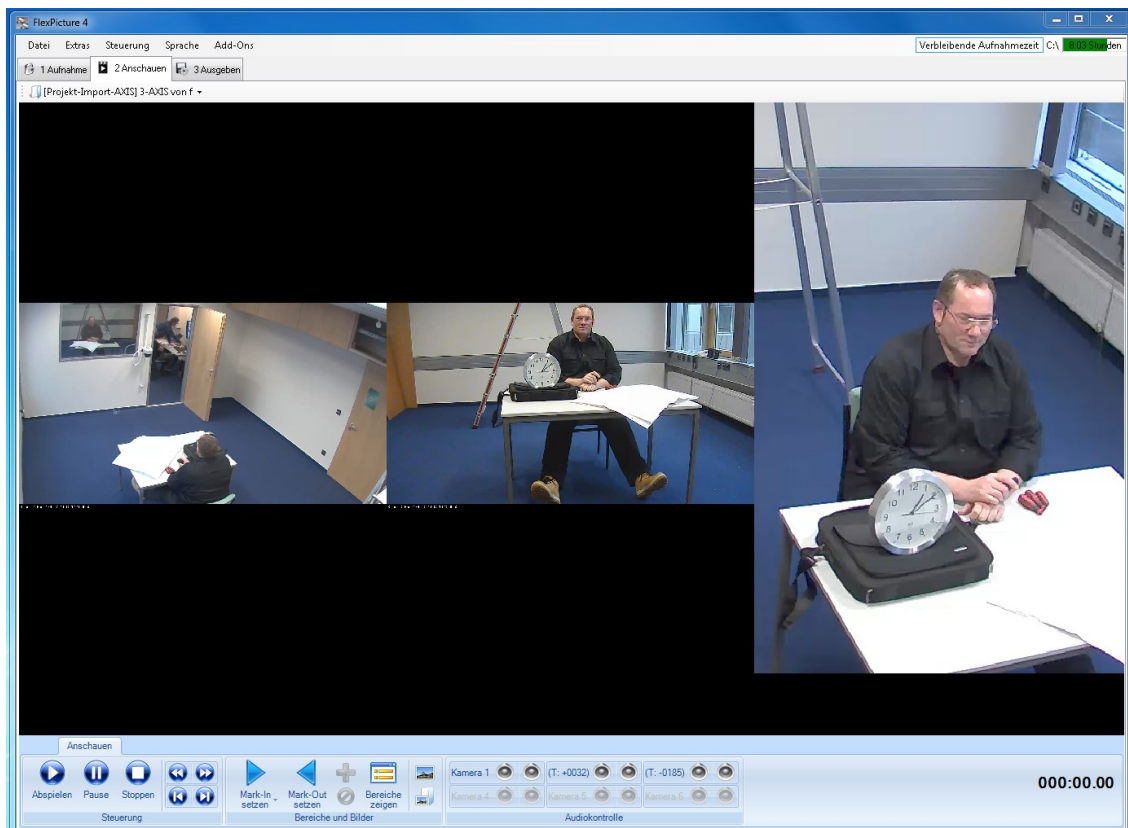

mobile lockable cabinet
with one switch to start
all controls in the cabinet stowable

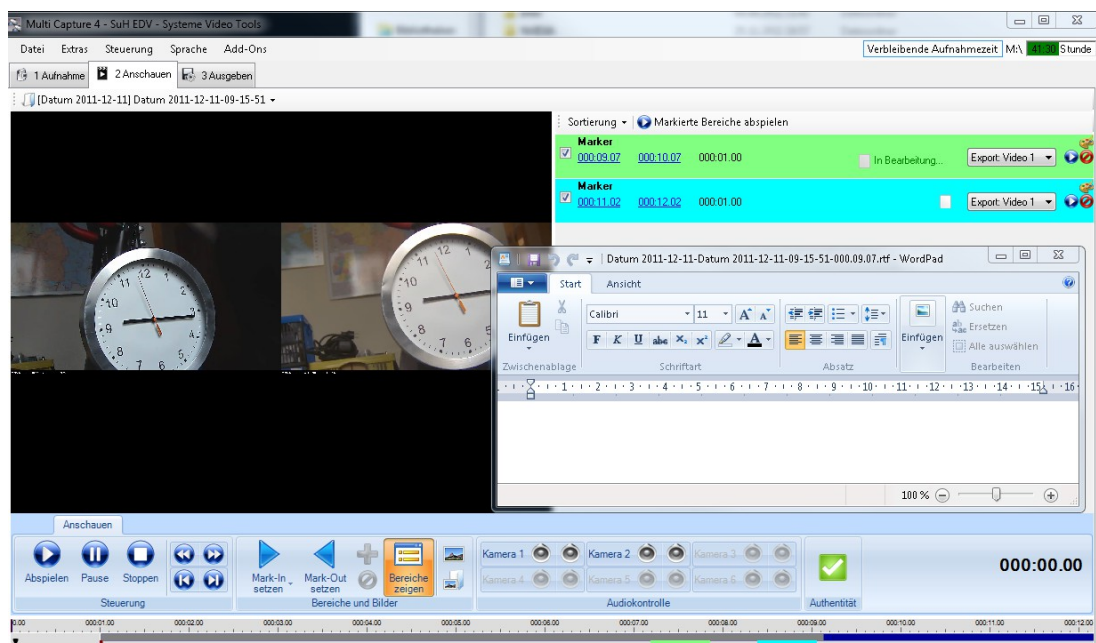

various views of the user interface

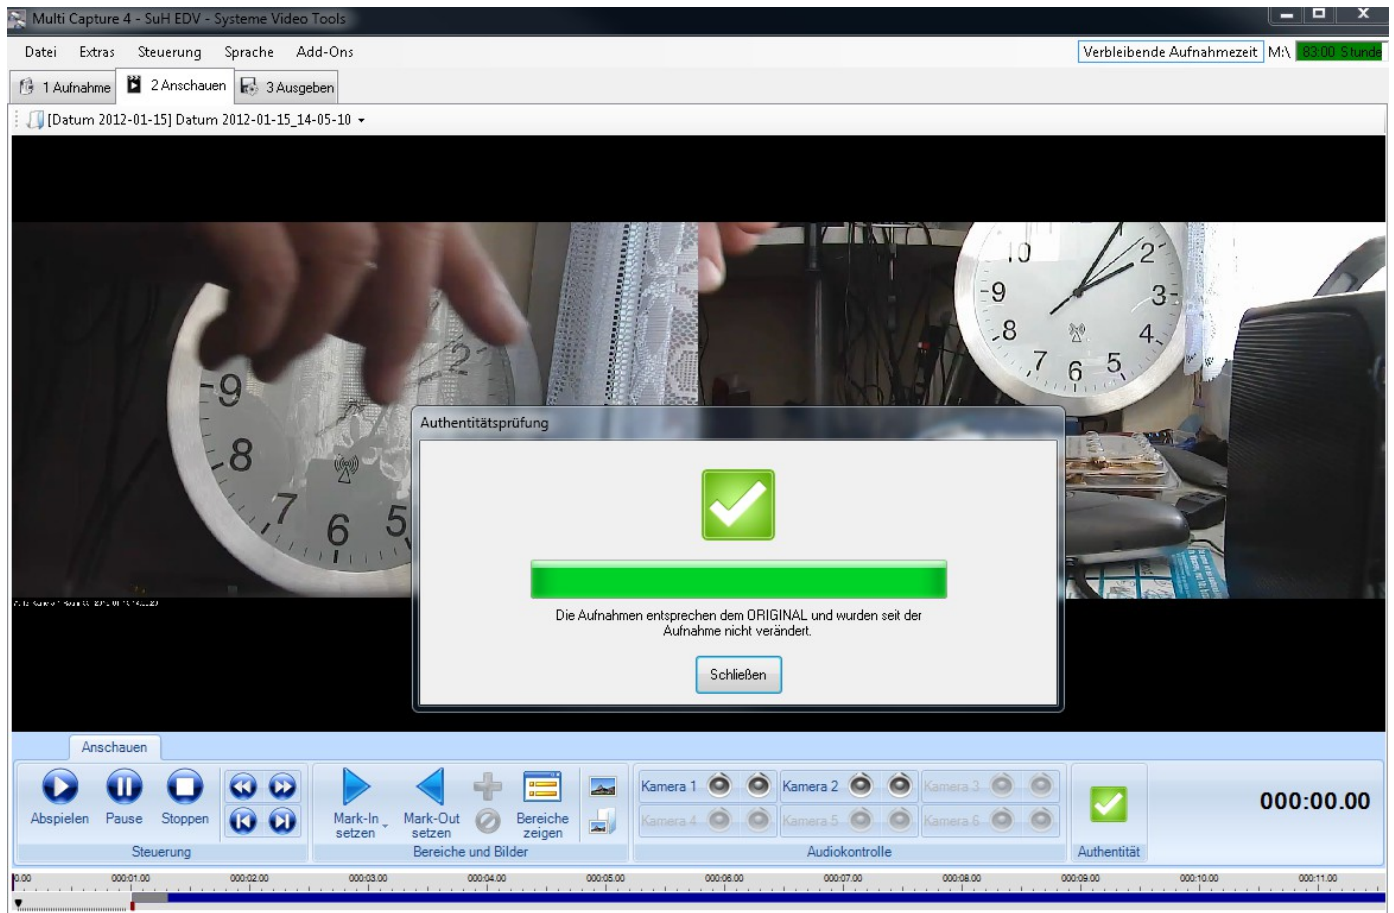

view aligned to desk for photos, drawings, notes...
3 cameras show the interviewed person from different angles,
allowing verification if there are further persons around and influence her.

For detail inspection every camera can be digitally zoomed smoothly, does not affect a recording.

To save time when searching the user can speak and type comments at any timecode position and mark areas. Markers can be found easily by just clicking on them with a mouse button.

A single mouse click allows to check whether a recording is the original file.
Check protocols can be saved along with original audio and video files to
DVD or Bluray without the need of rendering.
